BILLY CHENIAGO

Product Designer | UI/UX Designer

Jakarta, Indonesia | billychen105@gmail.com | +62 812 6265 8087

Portfolio: **billycheniago.com** | LinkedIn: linkedin.com/in/billycheniago

PROFESSIONAL SUMMARY

6+ years designing end-to-end digital products across web, mobile, and physical touchpoint systems, growing from UI/UX Designer into full product ownership as a Product Designer. Sole designer on a self-service ticketing kiosk and POS platform serving 8 user roles, taken from discovery to a working MVP. Also designed regtech products for digital e-stamp and national land-registry digitisation. Product Management certified, and now seeking a full-time Product or UI/UX Design role.

WORK EXPERIENCE

Product Designer (Freelance) | Self-Employed (Remote) Apr 2025 – Present

- Designed three end-to-end client applications alongside company profile and landing page builds: a spatial fire management response system, a healthcare app (Dimedics), and a queue management app. Typical engagement runs 3–4 months from brief to delivery.
- For the Korea-Indonesia Forest Cooperation Center (KIFC), designed the monitoring dashboard that lets the Jakarta head office track field operations in South Sumatra remotely, removing the need for on-site travel.
- Ran discovery and requirement gathering directly with clients, turning broad business asks into defined scope before design began.
- Built a repeatable AI-assisted workflow from design to working front-end builds, using AI to identify issues, debug, and test, and to fill gaps in my own HTML/CSS/React knowledge.

Product Designer | ZERAS (PT Zein Rarinda Solutions) · Contract Nov 2023 – Mar 2025

Furtuna & Ayogo: self-service ticketing kiosk with embedded POS, operator dashboards, and a companion booking app for Indonesian tourist attractions.

- Sole designer and design owner over ~16 months, leading discovery, journey mapping, and requirement definition with the business owner.
- Scoped QRIS payment out of the MVP and shipped cash-first, keeping the launch unblocked while a payment partnership was still under negotiation.
- Designed one system for 8 user roles with competing needs: visitors buying tickets unassisted at the kiosk, cashiers and gate validators working at speed, and admins, supervisors, management, partner operators, and super admins on data-dense dashboards.
- Shipped 5 core modules and 20+ features spanning 50+ screens, built on a shared library of 10+ components that kept kiosk, dashboard, and mobile interfaces consistent without duplicating work.
- Ran 5 rounds of usability testing with 3–5 participants each. Rounds 1–3 showed users stalling at ticket quantity selection in the POS flow; enlarging targets, surfacing missing information inline, and adding contextual guidance let first-time users complete the purchase unassisted by round 4.
- Owned the design–engineering interface with a 4–5 person engineering team: produced handoff specs, resolved kiosk hardware constraints on touch targets, and ran design QA on builds. The completed MVP was exhibited at SMESCO and demoed to seller partners.

Freelance Web Designer | ZERAS and Qalin Jul 2023 – Nov 2023

- Designed and delivered company websites for two clients in parallel; the ZERAS engagement converted into a full contract Product Designer role in Nov 2023.

UI/UX & Web Designer | PT Infinite Business Synergy (Infinite Digital Security) Apr 2022 – Jul 2023

- Designed end-to-end UI/UX for regulated-document products: a digital e-stamp (meterai digital) platform serving 3 user roles, and a national land-registry (ATR/BPN) digitisation system serving 6 user roles across public applicants, notaries, and internal BPN verification staff.
- Translated compliance requirements into usable flows: mandatory identity verification and explicit confirmation before an e-stamp could be affixed, and role-based views so each user type saw only authorised actions.
- Pushed back on a stakeholder request to surface every feature and CTA on a single screen. Made the cognitive-load case, prototyped both versions side by side, and proposed prioritising the primary action while moving low-frequency features deeper. The stakeholder adopted the simplified flow.
- Established the division's first reusable component library, style guidelines, and design documentation, standardising UI across products.
- Worked within a 6–8 person cross-functional team alongside product managers, backend and mobile engineers, QA, and business analysts through to UAT.
- Designed the Cikarang Listrindo residential electricity app (2022), unifying prepaid token purchase, multi-meter management, and service complaints in one flow.

UI/UX Designer | Karuna Baruna Nusantara International Dec 2019 – Apr 2022

Formerly PT Drife Solusi Integrasi; internally transferred in Jan 2021 when the product moved to the new entity.

- Designed end-to-end web and mobile experiences across marketplaces, social networking apps, and analytics dashboards, working on two client products and three additional projects concurrently.
- Owned high-visibility campaign pages for BINUS and BCA, building Instapage and Zapier automation that fed captured leads into tracked client marketing pipelines.

SKILLS

Design & Product: Product Discovery · User Research · Usability Testing · Customer Journey Mapping · Information Architecture · User Flows · Wireframing · Interaction Design · High-Fidelity Prototyping · Design System & Component Library · Developer Handoff · Design QA · Requirement Documentation · Agile / Scrum · AI-Assisted Design & Development

Tools: Figma (Auto Layout, Components, Variables) · FigJam · Jira · Trello · Notion · Instapage · Zapier · HTML / CSS

EDUCATION & CERTIFICATIONS

S.Kom., Information Systems | Institut Teknologi Del 2014 – 2019

Product Management — Certificate of Completion (2025)
